

0_Week - Code Comments

Sunday, June 25, 2017 10:44 AM

Code comments:

Throughout this program, the expectation is to thoroughly document and explain the code being written. At a minimum code comments must be included for the following:

1. Authorship (see the code attribution document)
2. All functions and classes
3. Try/Catch/Finally blocks
4. Complex business logic
5. Built-in functions

Do not use code comments where the intent is obvious. For example,

```
// variable to hold my name  
var name = "Richard";
```

```
// variable to hold my date of birth  
var date_of_birth = new Date();
```
